CASE STUDY:

McNab – Bardon Canopy 64.8KW Grid Tied Town House Community – Bardon QLD

Expert Electrical was appointed by McNab Construction as the Solar Procurement and Construction (EPC) contractor to deliver the 64.8KW grid connected solar PV system for the new Premium Townhouse development “Bardon Canopy” in Bardon, QLD”

This custom engineered solar power system has 240 x GCL 270W Solar Panels and 40 x German owned Zever Solar 1.5KW Inverters. It covers approx. 396 m2 of roof space. Expert Electricals electrical team worked very closely with the builder, Project manager and other contractors to design and install the bespoke Solar system solution.

The new owners of the Town Houses are now benefitting from reduced grid consumption and have the ongoing peace of mind that they are contributing to a lower carbon footprint in their homes. This has been a true eco friendly development and sits well with the leafy and premium feel of Bardon as a suburb of inner Brisbane.
